John M. Barcus built this model of the Williamson County Jail between 1969 and 1973.

I probably use this little book more than any other. It includes a useful chapter on how to choose the top five plants to grow. Chapter one is all about the greenhouse, covering how to grow well in pots. It shows the gardener what to expect from the plants. The book is a must-have for anyone growing plants indoors.

The book is organized into eight sections: annuals, perennials, trees, shrubs, roses, vines, herbs, bulbs, and grasses and ferns. Two of the book's features stand out: simple photos and illustrations. The gardener helps to plant a tropical garden, step-by-step, and sets up a greenhouse. These features make the book easy to follow along with. The book also includes a useful chapter on how to choose the top five plants for your desk, simple rules, your bathroom, light sunny areas, and your living room. The book is a must-have for anyone growing plants indoors.
